Everyone:

Attached is the preliminary report on the C&D debris sampled.

The concrete composite had an Aroclor hit and some TPH detections as well. My original recommendation was to include the concrete pieces proportionally into the appropriate soil stockpile per the approved profile (less than 10% - 20% by volume). I would recommend adding 1 bucket load of sized concrete per 10-12 buckets of soils when loading trucks and also place the concrete pieces in the middle layer to avoid damage to the trailer bed.

The wooden pieces appear to be good to go. When we get the final report from Pace, I would recommend modifying the C&D profile to include only wood so we can move forward with getting this waste approved and off-site. We have a 30-yd roll-off of wood only and ready to go once approved by Republic.

I'll forward the final when received.

Regards,

Don
